Our Company

Forjas Bolivar is an engineering company with more than 50 years of experience in the business, providing solutions from the design to the manufacturing and commissioning of bulk material conveyor equipment. We do it through CAD/CAE design tools and metal-mechanical processes that include the most advanced technology.

Products and services

- Design and manufacture of bulk material handling projects
- Upgrade of existing transportation systems.
- Redesign and manufacture of existing conveyors and components.
- Bulk transportation equipment advanced diagnostics.
- Reverse engineering.

Our clients

Bucket elevators

Clinker conveyors *Exclusive design

Drag conveyors

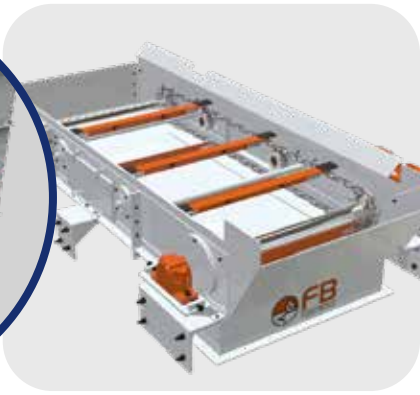

Apron feeders

Screw conveyors

Dust and spillage conveyors

Reclaimers and stackers

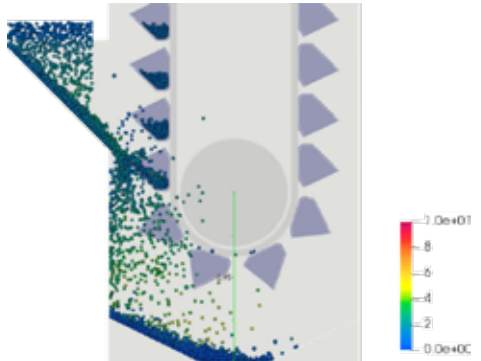

Kiln chains and accessories

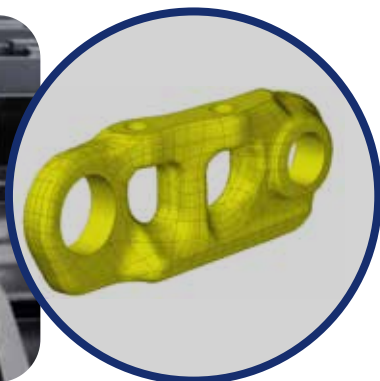

Conveying systems upgrades, retrofits and optimizations using CAD/CAE tools.

MBD (Multibody Dynamics)
FEM (Finite Element methods)
DEM (Discrete Element Methods)

Reverse Engineering

3D Scanning, measurement, and drawing
Metal spectrometry
Hardness testing
